Make your own game or Use as a worksheet (You will need 13 of these shapes)

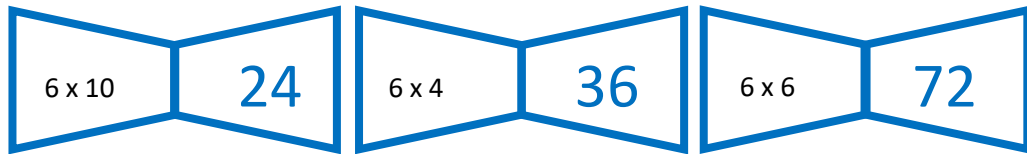

Ideas for activities on  
page below

# 6 Times Loop Cards

## (2 sets)

Ideas for activities –

1. Using one set of loop cards – share out all cards among the children in class giving one card to each person keeping one card to start chain. Fix your card to wall or board or lay on floor and ask children to bring matching card and secure on the board following on from the first loop card and so on.
2. Give a pair of children half each of one set of loop cards and ask them to work together co-operatively to assemble the cards in the correct sequence beginning and ending with the card marked start and stop respectively.
3. You could use the blank shape page for the children to make their own loop game for the 6 times table. A good exercise to develop their understanding might be to use the blue set of loop cards and ask children to convert the times sums into words. For example -

Original card

Children's converted card

Activities are adaptable for individual/group or whole class
